

# What the World Needs Now IS A SENSE OF HUMUS

**Compost, don't waste, make humus-soil, growing food is play not toil.**

Towards achieving a no-waste society, this campaign is motivating the world community to reduce, reuse and recycle all plastics so they can be re-manufactured into useful composting bins for every home. The bins will be hygienic, aerobic and conical shaped, similar to the ones shown here but with aerobic air-stream holes included at production.

These composting bins can then be used in every home yard to compost ALL the currently wasted, valuable, and continuously available bio-degradable materials to produce increasing quantities of earth worms and humus-rich soil. This soil can then be used to help grow increasing numbers of permaculture designed urban and rural food-forests, in all appropriate places possible.

As this activity accelerates globally it will enable, unlimited ethical and honourable employment, enhance local and global co-operation, grow an abundance of fresh healthy living foods to ensure food security for all, help mitigate climate change and help reverse global warming.

**Every compost stack is an Earth Repair Bank and every deposit made is an investment into a sustainable future.**

Please share this thought-seeding strategy with your friends and families and be part of this lobbying action to help accelerate achieving Vision 2020 and a world community of caring and sharing people enjoying fun-work and living in peace and sustainable abundance.

This campaign is being conducted by the Earth Repair Foundation (ERF) with the Environment Program and Blue Mountains Branch of the United Nations Association of Australia (NSW) Inc. [info@earthrepair.net](mailto:info@earthrepair.net)
