

# PERMACULTURE DESIGN CERTIFICATE

~ 72 HOUR CURRICULUM ~  
~ LEARNED OVER WEEKS,  
MONTHS AND/OR YEARS ~

This Thought-Seeding statement is prompting people of every nation to lobby all levels of their local, state and national governments, to enable the 72 hour curriculum of Permaculture learning to be integrated into all youth, refugee and asylum seeking detention centres. Also in correctional services facilities, refugee camps and Tent Cities for the Homeless.

This will enable everyone to participate in earth repair actions for a sustainable and abundant future for everybody.

Further, the 72 hours of Permaculture learning, now more than ever, needs to be included in all schools, colleges and universities and all other institutes of education. This vital information can be learned over weeks, months and/or years. Anyone can begin learning from now, by browsing through the thousands of pages of picture stories and videos on <https://permaculturenews.org> or just Google: Permaculture stories!

Efficient food and medicine gardens can be established as productive learning and growing centres in home and school yards, community gardens, detention centres and jails. Within a decade, increasing numbers of abundant food-forests and eco-villages will be growing in every country.

Permaculture shows how to co-operate with all of Earth's elements, species, climates and peoples, enabling everyone to live lives filled with absolute sustainable abundance in harmony with the Sun, the earth/soil, the wind and the rain.

Please share this post with friends and family, community organisations, government ministers and the media.  
**Thank you.**

# ~ This article is about Natural Capital that will benefit everyone and the World's environment ~

**Instead of humanity continuing to aim to achieve increasing and unlimited economic growth as such a high priority, starting in this year 2021, the time has come for all people to communicate and co-operate to increase unlimited growth of Natural Capital.**

## **What is Natural Capital?**

Growing Natural Capital will enable the occupants of every home block throughout the world, to engage in the practice of Sense of Humus composting and permaculture design by helping grow home food-forests while receiving free assistance from the Sun, the earth (humus-soil), the wind and the rain.

It is Natural Capital that will benefit all people, individually and collectively, including all present and future generations, and restore Earth's eco-systems simultaneously.

People in every home can participate, by converting front and back yards into abundant permaculture designed garden food-forests. This would include apartment and flat dwellers who could use sunny balconys, verges and/or nearby community gardens.

Escalating numbers of people are adopting the practice of maintaining home or community food and medicine gardens. It is now inevitable that integrated eco-villages will emerge as a prominent theme in suburban areas of towns and cities throughout the world.

There are numerous examples of this urban community practice already occurring in places like Cuba, Switzerland and Russia. Many other examples can be discovered by searching YouTube or Google for something like "community suburban food gardens and eco-villages in the world".

Within a decade, as more people and communities increasingly practice this, it will help mitigate global warming, provide meaningful survival knowledge to a generation, reverse under employment by giving ethical, honourable and creative employment to increasing numbers, and provide fresh, healthy, organically grown living foods for everyone.

At the world's first Global Earth Repair Conference that was held in early May 2019 in Washington State USA, it was determined that around 10% of humanity is all that would be needed to get this earth repair survival strategy implemented globally.

The benefits that will flow from doing this as a co-operative global initiative, over a decade, will have a profound impact on all present and future generations and the environment on Earth.

A Natural Capital learning poster is being created and will be available ASAP. This multi-language pictorial production will enable a whole generation to learn about the world's best practices in the skills of sustainable living for an abundant planet. See next page for description of the poster outline.

**Only one generation needs to change to improve the world for everyone.**

The goal from now is: for the majority of home yards in the world to establish organic Permaculture food and medicine gardens by the year 2050. These gardens will be nourished by the home production of increasing volumes of humus-rich soil and beneficial earth-healing worms.

**By processing in hygienic, aerobic, no-dig, conical shaped, composting bins, made from 100% recycled plastics, most people can participate in recycling all the currently wasted and continuously available bio-degradable materials that are generated on every home block, so humanity can collectively co-operate to help start replenishing Earth's seriously depleted topsoils, within this decade.**

**What The World Needs Now Is A Sense of Humus!**

**ERF WORM says** Compost instead of waste to breed earth worms and make humus-soil; assisting nature to grow the healthiest food, is **FUN WORK ~ not toil.**

**RECYCLED PLASTIC, CONICAL SHAPED, HYGIENIC AND AEROBIC, URBAN COMPOST BINS.**

The Vision is for the majority of our world's people to adopt organic gardening with permaculture principles and ethics, by the end of this decade, so that abundant food-forests are growing in most home yards and all other appropriate places.

**Earth Care ~ People Care ~ Fair Share**

# HELP RESCUE AND ENHANCE THE FUTURE FOR A SUSTAINABLE 'NEW EARTH' FOR ALL.

## THIS IS AN INVITATION FOR EVERYONE TO PARTICIPATE IN CO-CREATING A WORLD'S BEST PRACTICE, MULTI-LANGUAGE LEARNING POSTER FOR EVERY SCHOOL IN THE WORLD.

The Earth Repair Foundation is aspiring to help create this poster for every classroom wall and language. Its purpose is to provide information about the art of living skillfully in the 21st Century. It is to motivate everyone to participate in earth repair actions to help grow food and medicine gardens and appropriate trees towards mitigating global warming and enabling climate stability.

*"It is not only important to keep the forests we still have, but that companion planting and helping grow increasing quantities of appropriate trees, is the scientific solution to Earth's environmental dilemma".*

**Dr Richard St Barbe Baker, Founder, Men of the Trees and Children of the Green Earth**

- **The problems of the world can be solved in a garden.** Geoff Lawton, Permaculture Teacher/Designer
- **What permaculturists are doing is the most important activity that any group is doing on the planet.** Dr David Suzuki
- **If some food is given away, it nurtures others for a day. If many learn to grow their own, 'end world hunger seeds' are sown."**

**VISION:** Within a decade, to have permaculture designed garden food forests growing in all appropriate places in urban and rural environments, progressively building community resilience to climate change, inspiring wide-spread implementation of the practice of permaculture, healing the environment, and ending unemployment and hunger.

**OBJECTIVE:** This poster will show how sustainable food and tree growing practices can be used to enhance life on Earth, via a large pictorial story-board printed poster, specifically designed to provide knowledge on how to compost and make soil, and inter-grow food, medicine and trees. To make the poster an international award-winning work of art, designed so it can be easily translated into many languages, and displayed on every classroom wall in every country.

It will also inspire digital stories for the internet and public media, showing examples of community participation in successful growing projects to accelerate the permaculture\* paradigm shift for all-age people to live more sustainably. Each subject in the poster will have a link for related videos.

\* Permaculture is an Australian design science for permanent, sustainable, organic agriculture which includes logical water management and the companion planting of mixed-species fruit and nut trees with under-storeys of vegetables, herbs and medicinal plants, using minimum-maintenance and maximum-yield principles. Permaculture ethics are Earth Care, People Care, Fair Share.

**PARTICIPANTS:** Initial development of the poster has started with collaboration between the Earth Repair Foundation & Blue Mountains Branch of UNAA NSW, with assistance provided by members of the Global Permaculture Network. Other individuals and groups are invited to join in and help, such as, educators, artists, technical and IT specialists, video producers, relevant government departments, appropriate UN Agencies, and NGOs.

**THE POSTER:** Is to be printed in full colour on size A1 durable semi-gloss, possibly recycled card. At printing it will be score-folded into 8 x A4 panels for placing in a special envelope for mailing to anywhere in the world.

**POSTER CONTENTS:** Each A4 panel will comprise a theme with related subjects contained within it. All subjects will have images with succinct and concise descriptions that are easily translatable. Each line will be simply and concisely written for easy understanding in all languages. The poster, well-placed, will tirelessly radiate an inspirational and educational influence, 24 hours a day, 365 days a year.

A team of professional co-operators will choose the details within each panel. Carefully conceived and produced images and words, especially designed to inspire, educate and motivate in a gentle but effective fun-filled way. It will present a distillation of the world's best practices for sustainability in a clear visual, story-board style form. The poster with an accompanying multi-media educational package will have a powerful, positive impact on the next seven generations and beyond.

continued on page 2 ...

**This is an inexpensive production that could significantly assist our human community to live more sustainably. Only one generation needs to be positively influenced to think and act more wisely to help improve the world for everyone.**

**MARKETING, DISTRIBUTION AND SPONSORSHIP:** Sponsors are invited to participate and help fund the production. We appeal to government, corporate and/or private sponsors and philanthropists. With adequate funding, the estimated production time would be between four to six months.

**FOOD AND TREE GROWING RACE:** People of every nation can learn about and adopt the practice of permaculture as one of the world's most necessary, ethical and honourable employment activities.

**Some of the subjects that are being considered for inclusion in the eight panels of the poster are:**

- Humanity's position in the universe. Here we will cover outer and inner space and awareness of infinity and eternity. How to attain and maintain an attitude of healthy optimistic thinking and peaceful equanimity. A theme being considered for this section is: Think Globally, Act Locally, Respond Personally. **A relevant quote to consider: "The universe is my home and the human family is my tribe. The whole Earth is my birthplace and all humans are my brothers and sisters". Kahlil Gibran**
- Ecologically sustainable housing. Descriptions of eco-homes and integrated eco-villages. Illustrate retrofitting and houses made with appropriate technologies, using rainwater tanks, solar and wind power, grey water recycling and organic permaculture food gardens in and around each habitat;
- Sense of Humus composting. Establishing efficient food and medicine gardens as productive permaculture learning and growing centres in schools, backyards, parks, gaols, and rehabilitation facilities. **'Compost, instead of waste, and make humus soil, Helping nature grow the healthiest food, is FUN-WORK, not toil';**
- Capturing a time-line effect showing children planting seedling trees, and staging it over ten years comparing sizes, and then project to 40 years. Explain clearly how helping trees grow benefits the Earth and all its inhabitants;
- Highlight the importance of protecting the world's remaining natural heritage and biodiversity contained in native forests, lakes, rivers and oceans. Give practical advice and encouragement on planting and helping grow mixed species and companion grouped trees and food plants to store water in accumulating biomass, help stabilise the climate and with enough people practicing this will counteract global warming;
- Detail tips on growing and eating more raw living and sprouting foods to help acquire immunity efficiency, reverse disease and attain and maintain vital good health;
- Renewable energy and conservation systems; show the latest appropriate technologies and how they can be optimally applied to help humanity on the path to manifesting sustainable abundance for all;
- Further subjects that may be considered for inclusion could be found in the Earth Repair Charter, the 2020 VISION global solution strategy and the Imagine Back From The Future movie outline. These separate two-page documents can be found elsewhere in this file or at [earthrepair.net](http://earthrepair.net)

If you would like to help this proposal to actualise, please share these two pages to inform others, and/or write a personal letter recommending the concept to your local politicians and Members of State and Federal Parliaments.

Expressions of interest and offers of assistance to advance this opportunity are invited and welcomed.

If there are any aspects of this production that you'd like to enquire about or contribute to, please contact Team ERF at the Earth Repair Foundation (ERF), PO Box 503, Katoomba, Blue Mountains, NSW, 2780, AUST Phone: 02 4782 2625, 0408 267 195, [admin@earthrepair.net](mailto:admin@earthrepair.net) [www.earthrepair.net](http://www.earthrepair.net)

# A GLOBAL PETITION TO TRANSFORM SEWAGE INTO TREES

***"Planting and helping grow increasing quantities of appropriate trees, is the scientific solution to Earth's environmental dilemma".***

***Dr Richard St Barbe Baker, Q.B.E, LL.D, Internationally renowned founder of 'Men of the Trees'***

Ocean and river sewage outfalls represent a major threat to natural aquatic ecosystems and create a potential human health hazard. Through the regional treatment of sewage effluent using the world's best practice methods, and recycling this to irrigate and fertilise sustainable timber plantations, would help create: employment; increase biomass; absorb CO<sub>2</sub>; reduce pollution; help mitigate climate change; begin to reverse global warming; and produce tangible common wealth for present and future generations.

There is an urgent need to stop the waste of materials that have potential to be transformed into valuable resources for community advancement and world improvement.

***Therefore we respectfully ask every government to legislate for:***

- \* putting an end to the unnecessary practice of wasting primary treated sewage effluent, and instead, use this resource in sensible, ecologically resourceful and productive ways;
- \* using the World's Best Practice in ecologically sustainable development, planting and helping grow increasing quantities of appropriate trees in all appropriate places;
- \* fertilising and irrigating sustainable timber plantations wherever possible with treated effluent, in a similar way to the successful Chinese forestry model of inter-cropping fast growing trees;
- \* implementing strategies to transport treated sewage to suitable arid tree growing areas, either by back-loading via empty coal trucks, tunnelling and/or installing pipes along railway lines and pumping by using solar and other renewable energy sources;
- \* progressively transferring technological expertise, funding and resources from national military service sectors to help implement these sustainable objectives, and to motivate the international community to follow the example.

Please participate in this global thought-seeding campaign by petitioning and networking your local, state and national political leaders.

We ask you to print this page and write a friendly, positive supportive letter on the reverse side to give or send to your local politicians.

If you are able to help by starting an online Petition to network this proposal globally, that would be awesome. Thank you
