

“What the World Needs Now IS A SENSE OF HUMUS”

Compost instead of waste to breed Earth worms and make humus-soil, helping nature to grow the healthiest foods is FUN-WORK, NOT TOIL.

This campaign is motivating the world community to reduce, re-use and recycle all used hard and soft plastics to re-manufacture into composting bins, for every home yard in cities and towns world-wide, towards achieving a no-waste society.

The bins are hygienic, aerobic and conical shaped, (like the bins pictured here, although these bins have had eight x 3mm holes drilled into them in a symmetrical grid, and one in the lid), providing continuous aeration, enabling optimal bio-degradation and an efficient no-dig method.

Composting bins can be used in every home yard to stop the waste, and to process ALL the continuously available bio-degradable resources. This will produce increasing quantities of earth worms and humus-rich soil to use in helping grow permaculture-designed urban and rural food-forests in all appropriate places.

As this activity accelerates globally, it will enable unlimited ethical and honourable employment, enhance local and global co-operation, produce an abundance of fresh, healthy, living plant foods and ensure ongoing food security for all. It also has the potential to help mitigate climate change and reverse global warming.

Every compost stack is an earth repair bank and every deposit made is an investment into a sustainable future.

Please share this thought-seeding strategy with your friends and families and be part of the solution to help accelerate Vision 2030 towards a world community of caring and sharing people living in good health, peace, happiness and sustainable abundance.

This campaign is being conducted by the Earth Repair Foundation (ERF).

"What The World Needs Now is A SENSE OF HUMUS"

Composting to help grow increasing quantities of fruit and nut trees with herbs and vegetables companion-planted under and around them, and irrigating with minimum maintenance and maximum yield systems, is becoming the world's most productive employment activity to help end hunger by providing healthy living foods for everyone.

HOW TO COMPOST

PRESENTLY-WASTED BIODEGRADABLE MATERIALS INTO HUMUS TO REVITALISE SOILS AS A GIFT FOR MOTHER NATURE

HUMUS IS PRODUCED BY COMPOSTING DECAYING ORGANIC MATTER. IT'S AN EFFICIENT AND PRACTICAL WAY TO REPAIR THE EARTH BY RESTORING DEGRADED SOILS TO HELP PLANTS GROW.

HUMUS - IT'S HYGIENIC - IT'S SIMPLE

IT'S MADE FROM

- LAWN CLIPPINGS
- MULCHED VEGETATION
- FRUIT & VEGETABLE REFUSE
- FOOD SCRAPS
- KITCHEN COMPOST BUCKET
- SHREDDER PAPER
- MANURE
- SEWAGE
- RECYCLABLE COLLECTION BAGS
- PAULOWNIA TREE

HOW IT'S MADE ON A LARGE SCALE

BIODEGRADABLE MUNICIPAL COMPOSTING PLANT USING GARBAGE AND SEWAGE SLUDGE MIXED WITH FINE-GRAINED MINERAL ROCK FERTILISERS

RECEIVING INGREDIENTS MIX & FEED IN PROCESS

ALL HARMFUL PATHOGENS ARE DESTROYED BY NATURAL HEAT PROCESSES COMBINED WITH MODERN METHODS

CONTINUOUSLY ROTATING CYLINDERS

NO WINDOWS

MATURING WINDOWS

MUMUS IS BAGGED OR TRANSPORTED IN BULK LIKE ANY OTHER FERTILISER

WHAT IT'S USED FOR

- MULCH FOR GARDENS
- ORCHARDS
- POT PLANT MIX
- REVITALISING SOILS
- SEEDLINGS
- FOOD PARKS
- BULK HYGIENIC HUMUS
- NATURAL FERTILISER

WHAT THE RESULT IS

- CLEAN AIR
- LESS POLLUTION
- HEALTHY PLANTS & TREES
- CLEANER OCEANS & RIVERS
- HYGIENIC RECYCLED WATER
- HEALTHY FRUIT & VEGIES FREE FROM DISEASE & PESTS
- EARTHWORMS - THE GARDEN'S FRIEND
- HAPPY HEALTHY PEOPLE

WHAT THE WORLD NEEDS NOW IS A SENSE OF HUMUS

The Earth Repair Foundation ~ ERF, is networking for world-wide acceptance and implementation of the Earth Repair Charter Global Solution Strategy to help make 2021-2030 a Decade of Peace.

Subject: What the World Needs Now is a Sense Of Humus

Dear Sadhguru and the Save Our Soils, SOS Team,

We are 100% supportive of the Save Soils initiative and want to help in any and every way we can. We believe that making and saving soils is of utmost importance to all present and future generations.

Hearing you Sadhguru, speaking so clearly and openly about soils has giving renewed hope and increased optimism, that proposed feasible and achievable solutions to the problems with Earth's soils, will soon be more fully implemented.

In our opinion, urban home composting to help make soil is an essential cornerstone of the global Earth Repair movement as outlined in the Earth Repair Charter Global Solution Strategy. The Charter is our group's manifesto and you will notice references to composting in the Charter. See: <https://earthrepair.net/wp-content/uploads/2022/03/ERCEndorse-30032022.pdf>

Several of the self-complete pages in the following link, define our focus on composting to restore soils for repairing Earth. In the link there's an important two-page proposal to create a multi-language, world's best practise, sustainability learning poster that we are seeking funding to help make it happen. <https://earthrepair.net/wp-content/uploads/2022/04/SenseOfHumus-Composting-18042022.pdf>

In essence, our concept is to motivate an increase in the mass production of highly-effective and efficient, hygienic, aerobic, no-dig composting bins made from 100% recycled plastics. These bins are for use in most home-yards throughout the suburbs of towns and cities around the world. They can be manufactured in unlimited quantities as they are produced from the increasing resource of used plastics.

Properly and easily managed and maintained, earth repair compost bins enable earth worms to self-perpetuate and grow in increasing numbers, while at the same time creating increasing volumes of valuable humus-rich soil.

In each growing area, we encourage people to use the humus soil to feed permaculture designed garden food-forests in home yards and all other appropriate places. Permaculture design advocates minimum-maintenance-maximum-yield principles, and optimum ways to co-operate with the Sun, the earth, the wind and the rain to create lives of sustainable abundance.

As increasing numbers of people practise composting in rural and urban areas everywhere, this will progressively provide increasing quantities of organically grown fruits, herbs, vegetables and medicinal plants. It will also enable a significant increase in honourable and ethical employment, create suburban eco-villages, and progressively have a significant impact on helping mitigate global heating and climate damage.

A demonstration of this practise can be found in the Earth Repair Foundation's small front yard garden in Katoomba Blue Mountains Australia, demonstrating urban permaculture. There are 22 thriving fruit and nut trees growing on the block with abundant under storeys of herbs, vegetables and medicinal plants. <https://earthrepair.net/erfs-food-forest-garden>

The link in this sentence has a short (less than 2 minutes) song by Evie Pikler titled, 'What the World Needs Now is a Sense of Humus'. Hope you love it! We welcome you to consider using this or any of our work in the Save Soils movement. <https://youtu.be/V7VVRPdF7o0> We are moving towards making a more detailed HOW TO COMPOST video. As this develops, we'll keep you informed. When complete, it would be wonderful for it to receive your blessings Sadhguru.

May abundant success be with you, and us all, in this great quest to help rescue and enhance the future. We hope to communicate and connect further with you about how we may co-operate to help accelerate this important movement.

As founder of ERF, I am presenting this offering with sincerity and love on behalf of Team ERF at the Earth Repair Foundation. TEAM = Together Everyone Achieves More.

With sincerity,

Franklin MC Scarf

Revision: 3rd July, 2022

~ Natural Capital that will help restore Earth's soils and eco-systems, and benefit everyone ~

Instead of humanity continuing to aim to achieve increasing and unlimited economic growth as a high priority, starting in this year 2023, the time has come for all people to communicate and co-operate to increase exponential growth of Natural Capital.

What is Natural Capital?

It is Natural Capital that will benefit all people, individually and collectively, including all present and future generations, and restore Earth's eco-systems simultaneously.

Growing Natural Capital will enable the occupants of every home block throughout the world, to engage in the practice of Sense of Humus composting and permaculture design by helping grow home garden food-forests while receiving free assistance from the Sun, the earth, the wind and the rain.

People in every home can participate by converting front and back yards into abundant garden food-forests. This practise would also include apartment and flat dwellers who could use sunny balconys, verges and/or nearby community gardens. Always compost - there are ways!

Escalating numbers of people are adopting the practice of maintaining home or community food and medicine gardens. It is now inevitable that integrated eco-villages will emerge as a prominent theme in suburban areas of towns and cities throughout the world.

There are numerous examples of this urban community practice already occurring in places like Cuba, Switzerland and Russia. Many other examples can be discovered by searching YouTube or Google for something like "community suburban food gardens and eco-villages in the world".

Within a decade, as more people and communities increasingly practice this, it will help mitigate global warming, provide meaningful survival knowledge to a generation, reverse under employment by giving ethical, honourable and creative employment to increasing numbers, and provide fresh, healthy, organically grown living foods for everyone.

At the world's first Global Earth Repair Conference that was held in early May 2019 in Washington State USA, it was determined that around 10% of humanity is all that would be needed to get this earth repair survival strategy implemented globally.

The benefits that will flow from doing this as a co-operative global initiative, over a decade, will have a profound impact on all present and future generations and the environment on Earth.

A Natural Capital learning poster is being created and will be available ASAP. This multi-language pictorial production will enable a whole generation to learn about the world's best practices in the skills of sustainable living for an abundant planet. See next page for description of the poster outline.

Only one generation needs to change to improve the world for everyone.

The goal from now is: for the majority of home yards in the world to establish organic Permaculture food and medicine gardens by the year 2050. These gardens will be nourished by the home production of increasing volumes of humus-rich soil by home composting and beneficial earth-healing worms.

By composting in hygienic, aerobic, no-dig, conical shaped, compost bins, made from 100% recycled plastics, most people can participate in recycling all the currently wasted and continuously available bio-degradable materials that are generated on every home block, so humanity can collectively co-operate to help start replenishing Earth's seriously depleted topsoils, within this decade.
